Implementation new filling valve

Through the years the renowned BAUER filling valve has proven itself as safe and reliable. Nevertheless, we have succeeded to improve the construction of this valve even further.

As of January 1st 2007 the redesigned construction will be available. The filling valve will be executed with a new pressure release system with silencer.

Part numbers:

Filling valve PN200:

85877

Filling valve PN300:

85878

2/2

Advantages of the redesigned filling valve:

- ✓ More than 50% reduction of sound pressure (16 dB(A)).
- ✓ 100% retrofittable and replacable anywhere!
- ✓ Majority of parts separately available – most cost effective!
- ✓ Adapted maintenance and repair kits available as of now!
- ✓ Additionally the remaining sound pressure and vented air can be lead away from the valve over a G 1/8" inner thread connection!
- ✓ Low pitched tone whilst venting air, acceptable to human hearing!

Main body, replacement:
86100-KD

Maintenance kit:
N29617

Hose connection: **85032**

Direct connection PN 200: **85877**
